In fact....

- Your dependence on IT is growing at a faster rate than your administrative staff .
- Since LAN/WAN is used for mission critical application hence **down time** should be minimized.
- Open environment of Client Server requires **greater support**.
- Systems Managers spend much of time in **problem solving** or with **reactive tasks** therefore focusing more on maintain **tasks**.
- LAN today consists of **distributed environment** hence requires technical expertise on servers, desktop, and Services
- **Network Analysis Expertise** cond..

In fact...

- Security of information at great risk, you need to protect it from internal and external threats
- Safe storage and backup of data is important, is it at the safe hands in the organization?
- How do you make sure that information is not moving out of the organization knowingly or unknowingly.

- **Infrastructure Build Solution – Server**

We build high performance, scalable server solutions based on Intel 2 way, 4 way and Modular server (Blade) server platforms for mission critical applications. We have expertise for Blade servers and clustering solutions for 24x7 up time.
